

L.A. Crimes Analysis (2020–2024)*

Dataset period: 2020–2024

Analysis of crime frequency,
temporal trends,
geographic distribution
and victim patterns

*The dataset covers crime incidents between 2020 and 2024; however, according to stakeholder clarification, the most recent months of 2024 may be affected by delayed reporting in the records management system. Therefore, this portion of the timeline should be interpreted with caution where relevant.

Data Analyst: Manuel Marrocco

Client: Los Angeles City Public Safety Department

Los Angeles Most Frequent Crime Types

Top 20 Crime Categories by Number of Incidents

Los Angeles Crime Trend (2020–2024)

Number of reported crime incidents per month

- Annual Crime Peak
- Annual Crime Low
- Partial Reporting

Crime Concentration Hotspots — Los Angeles (2020–2024)

Crime concentration by geographic coordinates ($\geq 1\%$ of area incidents), 2020–2024.

Crime Hotspots $\geq 1\%$

- Central / Devonshire
- West LA
- Rampart / Willshire / Topanga
- Holliwood
- Van Nuys / Pacific / Olympic
- Foothill / Harbor / Mission / N. Hollywood
- Newton / Northeast / West Valley

The analysis reveals several geographic hotspots where a single coordinate accounts for a significant share of crimes within its police area. Devonshire and Central show the strongest concentration, while West LA exhibits highly concentrated locations. In most other areas, crime is more spatially dispersed, with no single location dominating incident counts.

Top 10 Weapons Used in Crimes Age Group — Los Angeles

Police Department data, 2020–2024.

Weapons Used Against Male Victims

Weapons Used Against Female Victims

From 2020 to 2024, **bodily force (strong-arm)** is by far the most common mechanism used in crimes among the top ten weapon categories. Across both charts, incidents are mainly concentrated among victims aged **25–34** and **35–49**. The overall distribution of weapon types is broadly similar for male and female victims, with bodily force clearly dominating the pattern of reported incidents.

Key Crime Insights — Los Angeles (2020–2024)

Most Frequent Crime Types

Crime in Los Angeles is highly concentrated in a few categories, with :

- **vehicle theft,**
- **simple assault,**
- **burglary from vehicle**

accounting for about **25%** of all incidents; however, the dataset may be partially incomplete for **2024** due to **incomplete** updates in the **records** management system.

Crime Trend Over Time

Crime levels remained relatively stable between **2020** and **2023**, typically ranging between **16K** and **21K** monthly incidents, with increases during warmer months and levels remaining stable or sometimes rising toward the end of the year; the sharp decline observed in late **2024** is likely due to **incomplete** data **updates** rather than a real reduction in crime.

Geographic Crime Hotspots

Crime incidents are distributed across the entire city; to improve **clarity** in the **visualization**, the analysis highlights the **most frequently** reported **coordinates**, revealing localized hotspots where single locations account for a notable share of incidents within their police areas.

The main **hotspots** include:

- **Central (2,413)**
- **Devonshire (1,532),**
- **West LA (1,470),**

followed by Rampart / Wilshire / Topanga, Hollywood, and Van Nuys / Pacific / Olympic.

Weapons Used, Age Groups and Gender

Bodily force (strong-arm) is by far the **most common** mechanism used in **crimes**, particularly affecting **victims** aged **25–34** and **35–49**; the charts also reveal a gender difference, with **female** victims more numerous in **strong-arm incidents**, while **male** victims appear more frequently in other **weapon-related** categories.
